timtoronto634.github.io

AI engineer who ships LLM-powered tools end-to-end — from field interviews with sales reps and factory-floor visits to production deployment and user onboarding. Five years of backend/fullstack engineering (Python, Go, TypeScript) underpin rapid AI prototyping as the sole AI engineer embedded in a sales organization.

WORK EXPERIENCE

GTM Engineer | AI Engineer
Kaminashi Inc. · Tokyo, Japan

May 2025 – Present

- Conducted stakeholder interviews with sales reps to map field information needs, then built a pre-meeting briefing tool powered by AWS Bedrock LLM API that auto-summarizes historical deal data — cutting first-meeting prep from 30 to 10 minutes and reclaiming 100+ hours/month across a 25-rep field sales team
- Architected a sales data platform (HubSpot CRM + Zoom Revenue Accelerator, REST APIs) that accrues meeting data with zero rep effort, then made the AI workflow it unlocked an org-wide practice — cutting post-meeting review from 20 to 8 minutes
- Ran LLM-based qualitative analysis on ~200 first-meeting transcripts, surfacing a deal attribute tied to a ~12x difference in late-stage progression rate — now feeding the redesign of the qualification process
- Encoded sales managers' deal-review criteria into an AI advisor by analyzing recorded coaching sessions; validated with one manager's team, then rolled out org-wide, shifting review time from fact-gathering to strategy
- As the sole AI engineer embedded in the sales organization, designed and shipped automation tools (Google Apps Script, Chrome extensions, LLM integrations), deliberately choosing low-maintenance solutions over custom infrastructure — built in as little as one day, in reps' hands the following week, used weekly by 30+ sales reps through direct onboarding

Fullstack Engineer — Go / TypeScript
Kaminashi Inc. · Tokyo, Japan

May 2023 – Apr 2025

- Led 0→1 development of Kaminashi Employee, an HR management product for frontline workers — from system design and infrastructure setup to backend implementation — while working with stakeholders to define minimum viable scope and accelerate time-to-delivery
- Implemented OIDC-compliant authentication flows across two services: client-side authorization and resource-server token validation, enabling secure cross-service access
- Partnered with a PM on factory-floor visits to interview site managers and frontline workers, directly observing operations to surface pain points invisible in stakeholder interviews — translated root-cause findings into product features rather than building to spec

Backend Engineer — Ruby / Go
freee Inc. · Tokyo, Japan

Apr 2021 – May 2023

- Introduced Amazon ElastiCache for a high-load gRPC endpoint, reducing peak DB load from 90% to 10%
- Streamlined incident response by building reusable analysis queries and escalation criteria, shortening resolution cycle from 2 months to 2 weeks

INTERNSHIPS

AI / Software Engineer Intern
NABLAS Inc. · Tokyo

Sep 2020 – Mar 2021

- Added CV problem sets to PyGrade educational platform (WebAssembly/pyodide); deployed audio recognition AI on Azure, contributing to a closed deal

ML Engineer Intern
DMM Games · Tokyo

Feb 2020 – May 2020

- Redesigned data flow of a game recommendation system on GCP, reducing unnecessary scans and lowering infrastructure cost

EDUCATION

MSc, Computer Science
Waseda University · Tokyo, Japan

Apr 2019 – Mar 2021

Researched interpretability of CNN architectures via correlation analysis of image noise reduction scores across methods · Designed distributed experiment pipelines across 20+ GPU servers, logging results to PostgreSQL and visualizing in Redash

International Student Exchange
University of Toronto Scarborough · Toronto, Canada

Sep 2016 – Apr 2017

SKILLS Python · Go · TypeScript · LLM APIs (AWS Bedrock, Claude) · AWS / Google Cloud · HubSpot API · Docker · Terraform

COMMUNITY AWS Community Builder (2025–2026) · AWS re:Invent 2023 & 2024 · Go Conference Japan 2024 & 2025 (Volunteer)

LANGUAGES Japanese (native) · English (business)
